"SPETONEX"

Mark

[Registered Patent] **TEMMLER** [Registered Patent]

The most reliable prophylactic remedy for the use of women when according to medical advice conception should not take place.

DIRECTIONS FOR USE.

The Apparatus is composed of a Tube containing the Spetonex preparation, a tube key and Virginal tube. The tubule must be carefully screwed on to the Tube which is then ready for use.

By fixing the tube key to the end of the tube and turning it several times the Spetonex compound is forced to the end of the tubule, and this is then inserted into the vagina as far as the orifice of the uterus. The key is then turned again slowly and the Spetonex preparation reaches the orifice of the uterus effectually closing same. After use the tubule is put into the rubber case supplied to prevent the Spetonex preparation from getting dry and to avoid wast.

The Spetonex Apparatus serves a double purpose: — In the first place the mucous preparation acts as a mechanical plug preventing the Spermatozoid from entering the womb, thereby already giving a certain amount of protection. In addition to this the mucous preparation is antiseptic and quickly destroys spermatozoid and bacterial germs, without having any sort of irritating or injurious effect whatever on the mucous membrane.

Manufactured by

The Temmler Chemical Works, Berlin

Science has from times immemorial been endeavouring to discover ways and means that would be suitable for the prevention of pregnancy in cases where, from reasons of health, this should be avoided. Weak physique, a tendency to disease or hereditary predisposition to constitutional diseases, such as tuberculosis, syphilis and similar diseases, all imperatively demand prevention of impregnation, in order that no sickly suffering offspring endowed at the cradle with the germ of death, may be allowed to grow up and form a weakly unhealthy race. The danger in this respect is ever increasing at the present time owing to the almost devastating social and economic conditions. It is therefore more than ever a duty of self preservation to take precautionary measures in cases such as these.

A prophylactic remedy highly approved and tested by the experience of many years is to be found in SPETONEX.

The principle of this remedy is that by means of an antiseptic viscid compound, soluble in water, the orifice of the uterus is perfectly closed, the semen is unable to penetrate into the vagina, the germ is killed and fructification of the ovum is rendered impossible.

The manipulation of the apparatus is hygienic and aesthetic and at the same time so simple, comfortable and clean that any woman can use it without fear of any injury whatever to her health. The application of the remedy is perfectly harmless. It contains no substances which irritate the mucous membrane, and it can be applied as often as desired. Every woman who takes a pride in cleanliness and health, as every woman should, can use this preparation to disinfect and deodorize the vagina, as, on account of its antiseptic properties Spetonex positively promotes health.

By reason of its unqualified reliability many a woman has been freed from that nervousness produced by the constant fear of pregnancy which was causing her to look faded and old. It is a wellknown fact that many women are depressed, ill-humoured and in a nervous state because their existence is a torment owing to their fear of conception. To such women SPETONEX guarantees absolute certainly of prevention.

Professional Opinions.

From the public Laboratory for hygienic, microscopical and physiological and chemical research by Dr. Aufrecht, Albrechtstr. 11, Berlin. N. W. 6.

The examination of the two Tubes of Spetonex sent to me to be tested relates to:

- (1) Its antiseptic effect
- (2) Its chemical composition
- (3) The effect of the Spetonex preparation on living spermatozoids.

(1) Bacteriological Condition.

As test fresh cultures of *Staphylococcus aureus* (pus cocci) and *Colibacilli* were made use of.

The result showed that by means of the test remedy the *Colibacilli* were killed in a few minutes. The hardier *Staphylococci* ceased to develop in the same concentration.

(2) The Chemical Analysis showed composition as follows:

Water etc. at 100 Cels. Essential elements . .	72.99
Dry residue	27.01
Organic elements (decomposable in intense heat)	22.36
Mineral elements	4.65

(3) Biological Condition.

Living Spermatozoids are killed almost at once by the preparation before us (as a result of the coagulation of the albuminous protoplasm). The shrivelling of the cells being plainly visible through the microscope.

The tests regarding the presence of Phenole, Cresol, Mercury and other caustic ingredients gave a negative result.

Signed: Dr. Aufrecht.

LETTERS OF APPRECIATION (TESTIMONIALS) RE SPETONEX

I confirm that I am very satisfied with the prophylactic remedy Spetonex. I have been using it for some time and up to the present there have been no detrimental consequences.

Sept. 1926.

Mrs. A. S. Knittelfeld, Steiermark

I herewith declare that I am using the prophylactic remedy Spetonex with the best results, am very satisfied with it and can recommend same to every woman.

February 1927.

Mrs. St. M. Salzbur

I have used Spetonex for some considerable time, am very pleased with it and can recommend it to every woman.

Oktober 1927.

Mrs. M. H. Knittelfeld (Steiermark)

As we have been very satisfied with our first order of Spetonex will you please send us two complete sets and two additional tubes.

May 1927.

G. P. Innsbruck

I have recommended your Spetonex in my practice for some years, and I think that with proper application only good can result. My great interest in this preparation lies in the fact that I am a Specialist for Diabetes and have often been asked by women suffering from this disease, or by their husbands, for a safe anti-conceptive. The prevention of pregnancy in women suffering from Diabetes is of the greatest importance, as pregnancy with diabetes would be a catastrophe. Therefore a safe prophylactic remedy is of the utmost necessity for such women.

September 1927.

Dr. N. Nürnberg

From the above testimonials, of which we still have a very great number, it may be noted that Spetonex fulfills the claim made in every way, as it has the following advantages:

Absolute Reliability. It has a quick germ-killing effect upon spermatozoa.

Absolutely harmless to the health and Well-Being of both husband and wife.

Most simple and comfortable method of application, as the introduction of the vagina tube and the pressing through of the preparation does not cause the slightest trouble.

The utmost cleanliness, because the substance is soluble in water and can be removed easily and harmlessly by rinsing or syringing with lukewarm water.
