Nolo-Gelettes

the
unfailing prophylactic

What must be required of an Antiseptic and Prophylactic for the Prevention of Conception and Infection?

The development of modern life made it a duty to science to create an antiseptic and prophylactic for the prevention of conception and infection with sexual diseases that afforded the woman absolute cleanliness and daintiness of person, and apart from that an absolute reliable protection against impregnation. The requirements of such a medium are not few, for:

Only such ingredients must be used that are non-poisonous, non-irritating, non-caustic which will at the same time destroy both all harmful bacteria and the male semen with absolute certainty.

The manner of application must be scarcely noticeable and unobjectionable.

The protective action must never fail if properly applied.

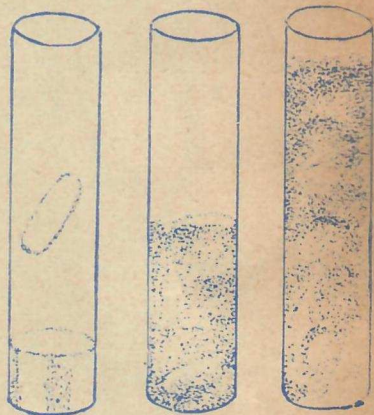

It must be non-odorous, unaffected by outside influences of temperature, and yet easily soluble when placed in the vagina.

It must be handy and of the smallest possible size so as to render the use hardly perceptible.

The Origin of Nolo-Gelettes

Dr. J. Schneider M. D., to whom we owe, in co-operation with a well known chemical laboratory, the invention of the NOLO-GELETES, continuously met with shortcomings in those products so far commended for these purposes. The task was to do away with all these imperfections, such as painful irritations during use, unpleasant odour, insufficient solubility, greasiness and inappropriate form and packing. After two years of continual experiments the inventor finally succeeded in producing the NOLO-GELETES in a composition and form which really fulfilled all the essential requirements of a preparation of this nature. The NOLO-GELETES may therefore safely be regarded as the most ideal and perfect preventive of to-day, in which the double task of effective protection against sexual diseases and reliable prevention of conception has been accomplished in the most perfectly imaginable manner.

NOLO-GELETES are manufactured in a scientific laboratory under the constant control of bacteriologists, chemists and physicians.

after 3,

after 10 Sec.

Why Nolo-Gelettes?

The carefully tested scientific composition combined with a most scrupulous manner of manufacture warrant the following, clearly discernable advantages:

Immediate solution of NOLO-GELETTES after introduction into the vagina.

Immediate, very strong and continuous formation of foam.

Certain prevention of conception by the formation of a firm foam which not only prevents the male sperm from penetrating further, but also destroys it immediately. Besides, the germicidal power of the ingredients employed affords at the same time an effective protection against all sexual infections, it being immaterial whether the man or the woman is infected. The sure protective action commences already 10 seconds after the insertion of NOLO-GELETTES.

NOLO-GELETTES are non-poisonous and do not contain any components causing burning or caustic sensations. None of the partners will notice the use of NOLO-GELETTES, and neither do they cause any embarrassment. They are non-odorous, colourless and not greasy. NOLO-GELETTES resist tropical temperatures and their stability is practically unlimited. Climatic influences do not impair the efficaciousness in any manner.

The protective action lasts for several hours because only about the fourth part of the NOLO-GELETTE, amply sufficient, however, to produce the desired protection, will dissolve immediately. The remainder will dissolve gradually, continually creating foam. Cleansing irrigations may be applied at any time after the introduction of NOLO-GELETTES. In case still undissolved parts should then appear, this is no cause for concern whatever as that part of the NOLO-GELETTE which dissolved immediately after application, has been fully sufficient for the purpose employed.

How Nolo-Gelettes work

The protective substances liberated by the process of solution entirely permeate the vaginal vault in the shape of a fine foam. The germicidal ingredients of the NOLO-GELETTES thus reach and fill all the cavities and folds of the feminine organism, and the protective action attained is the most effective possible. NOLO-GELETTES are entirely harmless, and as they do not affect even the most delicate human tissues, they may be used regularly without hesitation.

Make the Test Yourself

It is very simple to convince oneself of the immediate and vigorous action of NOLO-GELETTES by placing a GELETTE in a small glass tube filled with a little lukewarm water. The immediate formation of foam and gas clearly demonstrates the instantaneous protective action.

An even simpler test, which is absolutely harmless, is to wet a GELETTE with the tip of the tongue and notice the rapid foaming result. The tongue is one of the most sensitive parts of the body, so the fact that no burning or irritation is experienced is a proof that no healthy organs and tissues need fear any unpleasant sensations.

The Secure and Convenient Package

Each single NOLO-GELETTE is carefully put up in an exactly fitting small glass tube airtightly closed by means of a rubber stopper. The GELETTES are thus securely protected against all climatic influences or any deterioration resulting from long storage. This manner of packing has, furthermore, the great advantage of permitting each single GELETTE to be carried unobtrusively in the pocket or handbag,

The Composition of Nolo-Gelettes

NOLO-GELETES contain about half a gram of a harmless disinfecting and foaming substance. A combination of a quinine substance, in which the irritating effect has been neutralized, and a likewise non-irritating salt, the carbol-sulpho acid, destroy both all harmful bacteria that might cause an infection with sexual diseases and male sperm within a few seconds.

The Germicidal Action of Nolo-Gelettes

(Extract from the Report of the Laboratory for Bacteriology and Serology of Dr. Brandt of Luebeck, Germany)

The germicidal action of NOLO-GELETES was tested in the so-called disinfection test (according to Rideal-Walter). The effect of one NOLO-GELETTE in 5 centimetres of fluid showed, with regard to the destruction of the breeding of staphylococci, that 4 breeds raised for the purpose of this test, were completely killed within 15 seconds.

As the germs of infectious diseases (syphilis, gonorrhoea) as well as the human germs possess much less power of resistance than the germs taken for the test, it is safely maintained that the former will also be killed within the same time. Full guarantee is given that the NOLO-GELETES will always be supplied

with the same composition as used for the above mentioned test by the said laboratory.

The Standard Package contains 6 NOLO-GELETES

HOW TO USE NOLO-GELETES

After having taken the NOLO-GELETTE from the tube, it should be introduced into the vagina as far as possible. By the warmth of the body and the fluid the GELETTE will rapidly dissolve, and the vagina will be filled with a germicidal foam which forms the most effective protection against conception and infection. The remainder will dissolve gradually, continuing to create effective foam.

NOLO-GELETES have no injurious or irritating effect upon sound human tissue. Should a burning or other irritation be felt, it may be the symptom of a disease, and the physician should be consulted. In case a burning or irritating sensation is felt, NOLO-GELETES should not be used, and medical treatment will probably be necessary. Cleansing irrigations may be given at any time after introduction of NOLO-GELETES, dissolved in an irrigator filled with lukewarm water, possess a curing influence (1 to 2 GELETES on 1 irrigator.)

NOLO-GELETES which are not promptly used after having been taken out of the glass tube should not be used anymore later on as the influence of the moisture of the air may impair their protective power.

NOLO-GELETTES

vaginal suppositories

according to the formula of Dr. J. Schneider M. D.

American women, above all other nationalities, recognize the need for absolute cleanliness and daintiness of person and will therefore easily appreciate the numerous advantages of NOLO-GELETTES.

What the American

Woman requires of a Vaginal Suppository.

The essential requirements for a modern vaginal suppository are:

1. The use of absolutely non-poisonous, non-irritating, non caustic and non injurious substances, which at the same time will destroy all harmful bacteria or disturbing injections.
2. The method of use must be unobjectionable and scarcely noticeable.
3. They must be absolutely reliable for the purpose employed.
4. They must be non-odorous, unaffected by outside temperatures yet easily soluble when placed in the vagina.
5. They must be of the smallest possible size which will permit the retention of their effectiveness, while rendering their use hardly perceptible.

While there have been many preparations upon both the American and European market before the invention of NOLO-GELETTES, they have practically all suffered from one or more of the following disadvantages; 1. painful effects during use owing to the strength of the antiseptics employed, 2. uncertainty as to the results owing to weakening of the disinfectants to avoid irritation during or immediately after their use, 3. greasiness and the odor, unpleasant to many women, of cocoa butter, 4. melting as soon as subjected to summer or tropical temperatures, or finally, 5. large size which rendered their insertion unpleasant or embarrassing.

The Origin of NOLO-GELETTES.

Dr. J. Schneider M. D. a renowned German specialist in women's disorders of Hamburg Germany's greatest port city had many patients come to him requesting a safe, certain, suppository which would keep in all temperatures, be absolutely non-injurious to the delicate feminine organs, yet be thoroughly cleansing and antiseptic in action while pleasant to use.

Dr. Schneider knew of no such preparation and was forced to recommend inferior substitutes. He, therefore, determined if possible to make such a preparation himself, and after two years of repeated experiments and with the co-operation of a well known Hamburg pharmaceutical laboratory, finally evolved the MODERN suppository, NOLO-GELETTES, which are now extensively used by European women at home and in nearly all the tropical countries of the world.

No-lo-Gelettes are manufactured in a scientific laboratory under the constant control of experienced and qualified experts.

While NOLO-GELETTES are the invention of a German physician, an American woman was one of the first to recognize the great boon that this new preparation conferred upon the so called weaker sex. Having discovered NOLO-GELETTES while travelling abroad, upon her return she broadcast the news amongst her friends. The numerous mail orders received first rendered the manufacturing laboratory in Germany aware of the enthusiastic reception which awaited NOLO-GELETTES in the United States.

How NOLO-GELETTES Work.

NOLO-GELETTES upon being placed in the vagina dissolve within 30 seconds forming a gasified foam which thoroughly permeates and coats the manifold and intricate folds of the feminine organism. This permits the antiseptic and cleansing properties of NOLO-GELETTES to reach and disinfect all the proper cavities of the vaginal vault, rendering the protective action absolutely certain.

Make These Tests Yourself.

It is very simple to convince oneself of the immediate and vigorous action of NOLO-GELETTES by placing a GELETTE

in a glass or preferably a small tube filled with a little lukewarm water. The immediate formation of foam and gas clearly demonstrates the instantaneous protective action.

An even simpler test, which is absolutely harmless, is to wet a GELETTE with the tip of your tongue and notice the rapid foaming result. The tongue is one of the most sensitive parts of the body, so the fact that no burning or irritation is experienced proof that no healthy organs need fear unpleasant sensations.

The Secure and Convenient Package.

Each NOLO-GELETTE is put up in an airtight aluminium container which securely protects it against the influences of weather, climate or any deterioration resulting from long storage, provided the containers are kept tightly closed.

The package has, furthermore, the great advantage of permitting each single GELETTE to be carried unobtrusively in a handbag.

How to use NOLO-GELETTES.

After having taken the NOLO-GELETTE from the small screw cap it should be introduced into the vagina as deeply as possible. The GELETTE will be dissolved rapidly by the warmth of the body and the vaginal fluid so that the cavity will be filled with the antiseptic, cleansing and deodorizing foam which forms the most effective possible protection against bacteria or any undesirable injections.

NOLO-GELETTES have no injurious or irritating effects upon sound human tissue. A barely perceptible and only a momentary burning sensation may be felt by persons of great sensitiveness. This is harmless, should give no cause for concern and may be ignored.

Should a marked burning or irritating sensation be felt for any period of time, it probably means you are suffering, unknowingly, from a mild attack of leucorrhoea or other minor infection and it is advisable for you to consult your physician. In such a case, however, NOLO-GELETTES exercise a cleansing and curative influence. Irrigations with warm water dissolving two GELETTES in a hot water bottle will be very helpful in effecting a cure of most of these minor but unpleasant feminine afflictions. You should, however, visit your physician to make certain that your trouble is not serious.

NOLO-GELETTES which are not promptly used after having been taken out of the screw cap should be thrown away as the influence of the moisture of the air may impair their protective power.

The antiseptic action of the foam lasts for several hours but irrigations may be applied at any time after the introductions of the NOLO-GELETTE.

The Composition of NOLO-GELETTES.

NOLO-GELETTES contain about half a gram of a harmless disinfectant which gives the foaming action. With this is combined a quinine substance in which the irritating effects have been neutralized plus the addition of an oxychinilin-sulpho acid, which is an effective destroyer of harmful bacteria or other undesirable matter.

The small size and lack of odor of NOLO-GELETTES makes their use almost imperceptible which is a great advantage over the old fashioned cocoa butter suppositories or the large and unpleasant capsules formerly so widely used in Europe. Extract from the Report of the Laboratory for Bacteriology and Serology of Dr. Brandt, Lübeck, Germany:

"The germicidal action of the NOLO-GELETTES was tested by the so called disinfection test, (according to Rideal Walter). The effect of one NOLO-GELETTE in 5 cubic centimeters of fluid, showed with regard to the destruction of the breeds of staphylococci (pus) that four breeds raised for the purpose of this test were completely killed within 15 seconds."

THE STANDART PACKAGE CONTAINS 6 NOLO-GELETTES.
