

PRENTABS

TRADE "PRENTIF" MARK.

CONTRACEPTIVE TABLETS.

These Tablets have great antiseptic and prophylactic properties. They have been sold for many years and are rapidly superseding the Quinine and Cocoa Butter Pessary.

There are imitations by foreign manufacturers, but it should be pointed out that most of these depend entirely upon oxygen liberated as a sufficient spermicide. **Prentabs** have, as an additional safeguard, a very valuable chemical which is now being used extensively as a contraceptive; being highly efficient and absolutely harmless. It will be noticed that at the bottom of the tube there is a wad of wool covering a special material. This is an entirely new and scientific idea for the purpose of preserving the **Prentabs** from deterioration in any climate, and to ensure the efficacy of each tablet for an indefinite period, provided the Tube is kept well corked (Patent Pending).

DIRECTIONS

One Tablet should be inserted as high as possible about one minute before intercourse. If there is dryness of the Vagina it is advisable first to dip the tablet momentarily in water before inserting. A Douche may be used afterwards with advantage, but this is not absolutely necessary.

Special Caution :

 **ALWAYS KEEP TUBE WELL CORKED.**

PRICES:

Per Tube (12 TABLETS) **2/9**, 3 Tubes **7/6**, 12 Tubes **27/6**
