

MIR-E-KAHL

"THE SAFE PERSONAL HYGEINE FOR WOMEN"

HARMLESS—NO DOUCHING

About 25 Applications in a Tube

MIR-E-KAHL is a safe, non-poisonous, soothing preparation of high antiseptic value. For many years it has been successfully prescribed by physicians throughout the country in the treatment of Leucorrhea and similar disorders of the vaginal tract.

It is valuable as a preventive against other female disorders.

DIRECTIONS

Screw glass nozzle to metal tube. Then attach key to bottom of metal tube, and turn until the jelly fills the glass nozzle to the tip.

Insert the glass nozzle about one-half its length into the vagina, and give the key about one-half turn. This will give sufficient jelly for one application.

NOTE: Always keep the soft rubber cap on the glass nozzle tip, when not in use. By simply removing the soft rubber cap, the device is ready for further use.

The MIR-E-KAHL application is best made at night before retiring.

MIR-E-KAHL keeps indefinitely at the ordinary temperatures of the home and does not lose its germicidal power with age.
