

The comfort in wearing a sheath is greatly enhanced if a little "Contraceptalene" is smeared over the top of the male organ itself and also over the outside top of the sheath just before use.

It will then be impossible for either husband or wife to tell if a sheath is being used, besides preventing it being torn through "dragging."

Being non-greasy, "Contraceptalene" does not affect the rubber and is also antiseptic.

Price : 2/6 per Large Tube.
