

**T**HE Perfink Applicator is a highly polished aluminum bar seven inches long. One end is finished with a sphere seven-eighths inch in diameter and the other end is slotted.

The slotted end fits the rim of Ramses and Mensinga diaphragm and eliminates the difficulty and uncertainty sometimes experienced in placing diaphragm in proper position.

It is also used for inserting the French and Mizpah pessaries.

The spherical end is used to determine size of diaphragm required. They are made in many diameters.

It may be used to push a sponge to the extreme far end of the vagina in case the fingers are too short.

The spherical end is also used in spreading antiseptic cream to all parts of the vagina and cervix. It is covered with cream and inserted as far back as it will go, repeating several times until enough is applied.

#### PRICES

|                              |        |                               |        |
|------------------------------|--------|-------------------------------|--------|
| Aluminum Applicator, ea.     | \$1.50 | Antiseptic tablets, 10 in box | \$ .50 |
| Antiseptic cream, large tube | 1.00   | Ramses diaphragms, each       | 2.00   |
| “ “ pint jar                 | 2.00   | Pure gum pessaries “          | 1.00   |
| Silk netted sponge, each     | .50    | Latex rubber sheaths, pr. gr. | 6.00   |
| Syringe Applicator           |        |                               | \$1.00 |

The above tablets each contain one-half gram oxyquinolinesulphate, which is a more powerful antiseptic than bi-chloride of mercury, but it is non-poisonous.

One tablet in 1 pint water makes a 1 to 1000 solution.

## LOCAL INFORMATION CENTER

**I**NFORMATION on birth control methods is not permissible through the mail, but a national organization is working for a change in the postal laws. Some physicians and others for various reasons do not wish such information to reach the public at large.

However, there is a continuous flow of articles in the medical press as well as new books on the subject. Drug stores have pamphlets for distribution, and window displays of materials. Circulars are left at each house in town, and there are a few birth control clinics. These are sponsored by prominent and cultured women in the larger cities, but the smaller communities shift here and there for information. Birth control at present is more or less a "racket," materials being sold at high prices, so that those most in need cannot afford to buy.

Information is to be available locally, the leading books and journals being on file and a list of articles on birth control kept up to date. Any woman may secure reliable information without cost. The bureau is maintained by subscriptions and from the profit from sale of materials. Prices are but a fraction charged elsewhere, and in certain cases a limited amount of materials will be given free.

A woman specialist in charge will inform callers as to safe methods, and point out those that are not. Every woman is entitled to reliable information, as this is the only way to decrease the enormous number of abortions, with resulting deaths or injured health as well as suicides and divorce.

For further information regarding proposed information bureau, address:

**P**ERFINK Antiseptic Cream is compounded from the formula found most efficient after many clinical follow-up tests extending over a period of several years, the reports of which are available to any one interested.

The base is glycerite of starch with other ingredients to improve its texture, the antiseptic elements being boric acid, lactic acid and oxyquinoline-sulfate.

The latter is an imported chemical more powerful than either carbolic acid or bi-chloride of mercury but is non-poisonous and safe for the most delicate membranes. Is non-irritating but soothing, a healer, cleanser and deodorant, slightly acid and astringent.

Antiseptic Cream has a heavy consistency and cohesiveness, yet it spreads freely at once so that its action is instantaneous and positive. It is preferable to tablets, powders and suppositories which require heat, time and moisture to dissolve but they often fail to do so thus being of doubtful value.

Physicians prescribe this antiseptic for leucorrhea, infection, etc., a more technical circular being sent on request.

Perfink Antiseptic Cream also finds a place in general household use whenever an antiseptic is indicated as in the treatment of minor cuts and bruises, burns and sun burn, chapped hands and cracked lips, insect bites, prickly heat, etc., etc. It may be rubbed under the arm pits with good effect.

We manufacture this antiseptic cream under several formulae to meet individual conditions and preferences and your particular needs will be supplied on request. The personal element often requires consideration and explanation to insure best results.
