

"BIRCON"

(Regd.)

THE IDEAL CONTRACEPTIVE.

Completely reliable. Perfectly Harmless. Non-Greasy.
Non-Irritant. Odourless.

"Extract from "THE LANCET," February 14th, 1931.

"A comparative test using guinea pig sperms has shown "BIRCON" to be more effective than some other chemical contraceptives on the market. "BIRCON" is claimed to be harmless to the mucous membrane even when used regularly."

A famous firm of Analysts reports:

"The Tablets dissolve readily in water with much effervescence. The Solution when mixed with a normal specimen of Semen kills the spermatozoa at once.

HOW IT FUNCTIONS.

"BIRCON" is charged with strong, yet harmless prophylactics which when in contact with the natural humidity of the vagina, are released in the form of foam. This prevents the entry of the spermatozoa into the womb, and the antiseptic properties search every recess of the vaginal passage killing the spermatozoa immediately.

DIRECTIONS FOR USE.

In the event of dryness in the vagina it is advisable to dip the Tablet **FOR A MOMENT** in water immediately before insertion.

Whilst in a reclining position insert a "BIRCON" Tablet *as high in the vagina as possible* about three minutes before each occasion. Syringing may be carried out the next morning if so desired. This is by no means necessary, but it is essential in any case that syringing be deferred for at least one hour after each occasion. Keep the Tube tightly corked and store in a cool dry place.

"BIRCON" — THE PARENTS' FRIEND.
