Mil-San both in its preparation and method of application, is the result of long and careful research and scientific experiment by a number of the greatest gynaecologists in Europe to-day.

The untold misery and permanent injury caused by some of the methods commonly used for preventing conception and the alarming increase in the number of cases of abortion, brought home to these specialists the urgent need for a really certain non-injurious contraceptive.

With their unsurpassed experience and facilities for experiment they set to work to discover a contraceptive that could safely be recommended **to and by** the Medical Profession.

Such a contraceptive must:

- a. *Be absolutely non-injurious.*
- b. *Be certain in its action.*
- c. *Be easy and unobjectionable in use.*

After years of searching tests in the laboratory and in gynaecological clinics these Medical authorities have produced **Mil-San**, a certain and entirely harmless contraceptive.

DIRECTIONS FOR USE.

Mil-San retains its full power for several hours after being injected, but absolute efficacy can only be assured if it is used immediately before **each** intercourse and if the instructions are carefully followed.

1. Moisten the nipple on glass tube and slip neck of rubber bulb over it.
2. Compress bulb completely.
3. With the bulb compressed insert the tube about an inch deep into the **Mil-San** substance in the bottle.
4. Release pressure on bulb. The tube should fill to a point **just above the elbow**.
5. Introduce the tube as far as possible into the vagina and **empty** it by a **sharp** pressure on the bulb.

The protective action of Mil-San is immediate.

The use of other protective measures jointly with **Mil-San** is inadvisable. Douching is quite unnecessary. If however, a douche is desired, it should not be taken until at least two hours after intercourse — otherwise the contraceptive action of **Mil-San** may be endangered.

IMPORTANT.

The correct quantity of **Mil-San** will be drawn into the tube if the bulb is completely compressed and then released. This will fill the tube to a point just above the elbow. This quantity is amply sufficient in all normal cases, but women who conceive very easily and those who suffer from prolapse are recommended for greater safety to use double this quantity.

Do not insert the glass tube deeper than necessary into the **Mil-San** substance when filling it as this occasions waste owing to the substance sticking to the outside of the tube, but always make sure that the tube is really filled with **Mil-San** and that only air has not been sucked in.

Greater economy in the use of **Mil-San** can be attained if before use the glass tube is filled and emptied with water.

The bottle should always be kept carefully closed with the special bakelite cap (provided with the complete set only). The tube must be kept scrupulously clean. After use it should be rinsed out with warm water several times or held under a tap so that water may run through it.

Mil-San is not only a sure, harmless and thoroughly reliable contraceptive, but, it is also cleansing, antiseptic and tonic in its action. It affords absolute and positive security against conception because it completely destroys and dissolves the spermatozoa; its jelly-like consistency forms a germicidal barrier which seals the entrance to the womb; it thoroughly disinfects and tones the mucus membrane lining of the vagina.

MIL-SAN

Is safe.

Is absolutely harmless.

Is entirely free from poison.

Protects, disinfects and is tonic in its action.

Causes no irritation either during or after use.

Is non-greasy.

Does not stain.

Can be used easily and unobtrusively.

Is immediate in its action.

Is quite unnoticeable in use.

Is economical. A bottle contains 12 applications.

Does not deteriorate unless exposed to frost or direct sunlight.

MIL-SAN is obtainable in two packings:

The complete set price 7/6d. post free

Refill price 5/-d. " "

On purchases of a complete set with three refills a reduction is made to an inclusive price of one guinea post free.

The complete set, packed in a neat, unobtrusive box, consists of a bottle of **Mil-San** with special bakelite cap, a glass tube, and a rubber bulb.

Since the tube and bulb can be used indefinitely, after the first purchase refill packings which contain a full size bottle of **Mil-San** only need be ordered. Transfer the special bakelite cap to the new bottle.

All applications for advice concerning **Mil-San** should be addressed to your doctor. The company is not prepared to enter into correspondence nor to give consultations on the subject.

Ask your chemist for **Mil-San** or you may order direct from the sole distributors for the British Empire:
