

Trade **"SPETONEX"** Mark

TEMMLER

Registered No. U.K. 462941.

Where in accordance with medical advice, conception should not take place, "SPETONEX" forms the most reliable preventative for the use of women, that is obtainable.

"SPETONEX" represents a conception-preventative which has met with the highest approval as the result of many years' practical experience.

The method by which this remedy acts is that the jelly-like antiseptic compound—soluble in water—forms a perfectly closed door to the womb by plugging the entrance and so preventing the semen from gaining admittance. The germ is destroyed, and fructification of the ovum rendered impossible.

The manipulation of the apparatus is perfectly hygienic, inoffensive to the most sensitive nature and yet so simple, comfortable and cleanly in application that it can be used with the greatest confidence as regards its effect on the woman's health. "Spetonex" is absolutely free from any substance which irritates the mucous membrane, however frequently used. "Spetonex" on account of its antiseptic properties disinfects and deodorizes the vagina; this health promoting preparation should therefore be used by every woman who values personal cleanliness and general hygiene.

"SPETONEX" possesses the following advantages:

Absolute reliability. It is a rapid germ killing effect on the spermatozoa.

Absolute harmlessness to the health and general well being of both husband and wife.

Great simplicity and comfort in use. The introduction of the vaginal tube and the pressing through of the jelly is carried out without the slightest trouble.

Extreme cleanliness. The preparation, being soluble in water, can easily and harmlessly be removed by rinsing or syringing with lukewarm water.

DIRECTIONS FOR USE.

The apparatus consists of a collapsible tube which contains a "Spetonex" preparation, a tube key and a long vaginal tube. The vaginal tube is carefully screwed on to the collapsible tube. The tube key is fixed to the bottom end of the collapsible tube and given several turns thus forcing the "Spetonex" compound up to the end of the vaginal tube which is gently inserted into the vagina as far as the mouth of the womb. By again slowly turning the key the "Spetonex" is ejected and effectively seals the mouth of the womb. After use, the vaginal tube should be placed in the rubber case supplied, as this prevents the "Spetonex" preparation from becoming dry and thus prevents waste.

The "Spetonex" outfit serves a double purpose: In the first place the jelly-like preparation acts as a mechanical plug, prevents the spermatozoa from entering the womb, and so already affords a certain amount of protection. In addition to this, however, the preparation has an antiseptic action, rapidly destroying the spermatozoid and bacterial germs with the slightest irritation or harmful effect on the mucous membrane, in quite the contrary, for medical evidence proves that it promotes healthy condition of the parts.

MEDICAL LITERATURE.

"OBSERVATIONS ON ANTICONCEPTIVES."

BY

DR. F. BRUICK, Berlin.

From the *Deutsche Aerztezeitung* (German Medical Journal), No. 142, 13.

"Spetonex does not fulfil its purpose only by forming a mechanical stop, but acts also directly on the spermatozoa by means of the astringent and microbe-destroying properties which it possesses. Spetonex is undeniably the most reliable anticonceptive known. I might also mention, in conclusion, that the cost is quite moderate as this is an important factor to the general practitioner."

From the Public Laboratories, 11 Albrecht Str., Berlin, N.W. 6.

DR. AUFRICHT states:

"The living spermatozooids in our researches were killed almost immediately by SPETONEX (as a result of the coagulation of the albuminous protoplasm), the shrivelling up of the cells being plainly visible by the microscope."

Price.—The complete "Spetonex" outfit is sold at 3/6.

To be obtained from all pharmacies.

Manufactured by:

THE TEMMLER CHEMICAL WORKS,
BERLIN—JOHANNISTHAL.
