

SPETONEX

Spetonex

There is no intention of here entering into any social or other consideration with regard to family limitation, it being a well established fact that the medical man is nowadays very frequently consulted as to the best means by which this purpose may be attained with certainty. The Doctor is naturally insistent that the agent recommended by him should be positively reliable, non-injurious, convenient and simple in use. The soluble pessaries mostly composed of cacao-butter or other oily substances contain quinine or similar preparations as their active principle. Exhaustive scientific investigations at University (Oxford, Jena, etc.) and other laboratories have conclusively proved that these agents are utterly useless as contraceptives.

SPETONEX is a jelly-like antiseptic compound, the active principle of which has been proved by extensive research work to be one of the most powerful spermatozoa destructors known and that the most minute quantity suffices to rapidly deprive the spermatozoa of their vitality. SPETONEX is not only quite harmless in its local or general effect however frequently used, but, furthermore, has a beneficial action, as by means of its antiseptic qualities it disinfects and deodorizes the vagina forming an aid to personal cleanliness and hygiene. Many experiments, chemical, bacteriological, etc., carried

out by eminent authorities have proved the absolute efficiency of the preparation as a rapid spermicide and the absence of even the slightest degree of irritant quality. These findings have been fully corroborated in practice for some years and as a result SPETONEX is recommended by a very large number of medical men including many gynaecologists.

COMPOSITION :

The active principle of the jelly-like substance composing SPETONEX is :

Ortho-oxycholin Sulph.

in a mucilaginous base.

DIRECTIONS for use:

The outfit consists of a collapsible tube containing the SPETONEX preparation, a tube key and a long vaginal tube. The vaginal tube is carefully screwed on to the collapsible tube. The tube key is now fixed to the bottom end of the collapsible tube and given several turns, thus forcing the SPETONEX compound up to the end of the vaginal tube which is gently inserted into the vagina as far as the mouth of the womb. By again slowly giving the key two or three turns, the SPETONEX is ejected and effectually seals the mouth of the womb. After use the vaginal tube should be placed in the rubber case supplied, as this prevents the SPETONEX preparation from becoming dry and thus wasted.

The SPETONEX outfit serves a double purpose :—In the first place the jelly-like preparation acts as a mechanical plug preventing the spermatozoa from entering the womb, and thus already affords a certain amount of protection. Additionally, the preparation has a powerful antiseptic action, rapidly destroying the spermatozoid and bacterial germs without the slightest irritation or harmful effect, in fact quite to the contrary, for medical evidence proves that it promotes a healthy condition of the parts, thus proving SPETONEX to be the ideal contraceptive by its :—

Immediate and certain action.

Simplicity in use. Inexpensiveness.

Absolute non irritability and harmlessness.

Reliability.

Disinfection of the parts rendering them healthy.

Spetonex is soluble in water, so it can be easily and harmlessly removed by douching or syringing with lukewarm water.

MEDICAL OPINIONS :

1. "For seven years I have been experimenting with a view to obtaining the ideal method of birth control and during this period I have tried many known facilities. I consider SPETONEX of definite value."
2. "I was impressed with the results obtained with the chemical contraceptive jelly SPETONEX and have introduced same to my patients."
3. "I find SPETONEX excellent and recommend same freely in my practice. I obtain through local chemist."
4. "SPETONEX I consider of great value and certainly an improvement over the greasy pessaries."
5. "Please forward a further 6 tubes of SPETONEX, I think same much superior to many existing preparations."
6. "Patients have reported satisfactory results with your SPETONEX and married couples seem very grateful for this material—further samples would be appreciated."
7. "Have prescribed SPETONEX to six patients and so far I have received no complaints."
8. "I consider SPETONEX as near perfect as possible and have mentioned same to several medical colleagues."
9. "I am regularly prescribing both SPETON and SPETONEX in my practice."
10. "In a working-class practice I find SPETONEX meets a long felt want—further samples would be useful."
