

THE MATES CONDOM RANGE

Mates Superstrong is a thicker (heavier gauge) straight shaft condom in the traditional shape, (rather like a test tube with a teat), that suits men who are used to the straight shaft type and want the benefits of the extra thickness for safety or because of their particular preferences. Non-spermiocidally lubricated with SK-70.

Mates Conform is a snugger fitting contoured condom with a wide head and a smaller neck, which is 49mm wide at the base, which makes the condom feel less restrictive. The teat ended wide head is coupled with a shaped neck that fits behind the glans to keep the condom on during even the most vigorous lovemaking. Spermiocidally lubricated with Nonoxynol -9.

Mates Intensity are straight shaft, teat ended, condoms in the traditional shape with extra studs of latex added to the gauge of the condom designed to give heightened sensation to the female partner. Non-spermiocidally lubricated with SK-70.

Mates Natural is a flared condom with a wide head that makes it feel less restrictive and is ideal for those who find most condoms 'too tight'. They are easy to put on and have a natural shape for improved comfort. Spermiocidally lubricated with Nonoxynol -9.

Mates Sensitive is an ultra thin gauge straight shaft condom in the traditional shape (rather like a test tube with a teat), that suits men who are used to the straight shaft type and want the benefits of a thin condom but still providing maximum protection. Non-spermiocidally lubricated.

Mates Ultra Safe is a contoured condom with a wide head that makes it feel less restrictive and provides enhanced sensitivity. The teat ended wide head is coupled with a shaped neck that fits snugly behind the glans to help keep the condom on during even the most vigorous lovemaking. Spermiocidally lubricated with Nonoxynol -9.

Mates Ribbed are straight shaft, teat ended, condoms in the traditional shape with extra bands of latex added to the gauge of the condom designed to give heightened sensation to the female partner. Spermiocidally lubricated with Nonoxynol-9.

Mates Xtra Pleasure is a flared condom with an oversized head that is larger than all other flared or shaped condoms, giving an added benefit to users. It will create additional stimulation for both partners due to the movement that will be generated, enhancing the sensation for both the man and the woman giving an overall more pleasurable experience. Spermiocidally lubricated with Nonoxynol-9.

Mates Original condoms have a straight shaft condom in the traditional shape, (rather like a test tube with a teat), that suits men who are used to the straight shaft type profile with a nipple end. This traditional design provides excellent reassurance in use. Non-spermiocidally lubricated with SK-70.

Mates Coloured condoms are vibrantly coloured for extra fun. They are the same shape as Ultra Safe and offer the same benefits. Spermiocidally lubricated with Nonoxynol -9.

ALL MATES LARGER HEADED CONDOMS ALLOW ANY RESIDUE AIR TO CIRCULATE, THUS REDUCING THE RISK OF THE CONDOM SPLITTING.
